

# STRATA2U-3200

**STRATA2U-3200**

This router provides all basic IPv6 routing services, as well as routing of advanced transports such as Multicast and Mobile IPv6 (MIPv6). For security, every STRATA router is IPsec enabled with varying configurable modes of encryption. In addition to standard routing, the STRATA2U-3200 provides the most versatile and efficient migration routing currently available.

With a massive TRTM cache and an exceptionally fast core processor, this router can easily manage networks with workstations in excess of 1000 while providing connectivity to multiple servers.

After your migration phase is complete, the STRATA family of servers will continue to provide efficient and comprehensive IPv6 connectivity and services to your network.

## Specifications

Form Factor:	Standard 2U Rackmounted
AC Input:	110v-240v (Switchable)
Processor:	1.6GHz
NetSH Protocol:	v1.3
TRTM Cache:	32k
Connectivity:	1xRJ45 / 1GbE
MIPv6:	<b>Yes</b>
Multicast:	<b>Yes</b>
TSP:	<b>Yes</b>
Transports:	TCP, UDP, Basic ICMP, ARP, ND
